MAPPING

```
ggplot(data)+  
  geom_point(aes(month, downloads) , colour="blue")
```

```
ggplot(data)+  
  geom_point(aes(month, downloads, colour=year))
```

STATISTICS

```
ggplot(data)+  
  stat_summary(aes(x = year, y = downloads), fun = mean)
```

SCALES

```
ggplot(data, mapping)+  
  geom_xxx()+  
  scale_<aes>_<type>()
```

```
ggplot(data)+  
  geom_point(aes(date, log10(downloads), colour=year))
```

+ scale_colour_brewer(palette)

+ scale_size_area()

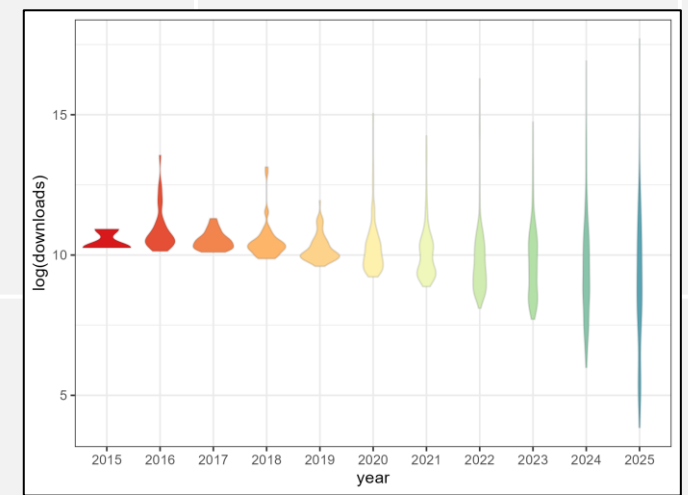

GEOMETRIES

`geom_point()` & `geom_line()`

`geom_bar()`

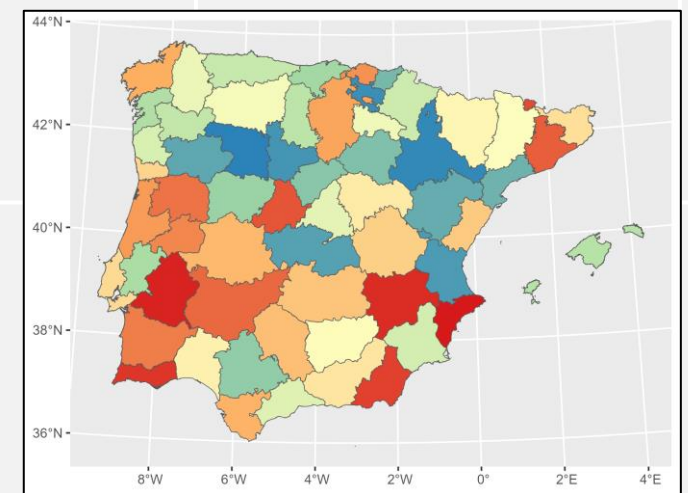

`geom_violin()`

`geom_histogram()`

`stat_density_2d()`

`geom_spatvect()`

GEOMETRIES

Basics

ggplot2 is based on the **grammar of graphics**, the idea that you can build every graph from the same components: a **data set**, a **coordinate system**, and **geoms**—visual marks that represent data points.

To display values, map variables in the data to visual properties of the geom (**aesthetics**) like **size**, **color**, and **x** and **y** locations.

Complete the template below to build a graph.

```
ggplot (data = <DATA>) +
  <GEOM_FUNCTION> (mapping = aes (<MAPPINGS>),
    stat = <STAT>, position = <POSITION>) +
  <COORDINATE_FUNCTION> +
  <FACET_FUNCTION> +
  <SCALE_FUNCTION> +
  <THEME_FUNCTION>
```

required
Not required, sensible defaults supplied

ggplot(data = mpg, aes(x = cty, y = hwy)) Begins a plot that you finish by adding layers to. Add one geom function per layer.

last_plot() Returns the last plot.

ggsave("plot.png", width = 5, height = 5) Saves last plot as 5' x 5' file named "plot.png" in working directory. Matches file type to file extension.

Aes Common aesthetic values.

color and **fill** - string ("red", "#RRGGBB")

linetype - integer or string (0 = "blank", 1 = "solid", 2 = "dashed", 3 = "dotted", 4 = "dotdash", 5 = "longdash", 6 = "twodash")

size - integer (in mm for size of points and text)

linewidth - integer (in mm for widths of lines)

shape - integer/shape name or a single character ("a")

Geoms

Use a geom function to represent data points, use the geom's aesthetic properties to represent variables. Each function returns a layer.

GRAPHICAL PRIMITIVES

```
a <- ggplot(economics, aes(date, unemployment))
b <- ggplot(seals, aes(x = long, y = lat))
```

a + geom_blank() and **a + expand_limits()**
Ensure limits include values across all plots.

b + geom_curve(aes(yend = lat + 1, xend = long + 1), curvature = 1) - x, yend, y, yend, alpha, color, curvature, linetype, size

a + geom_path(lineend = "butt", linejoin = "round", linemitre = 1) - x, y, alpha, color, group, linetype, size

a + geom_polygon(aes(alpha = 50)) - x, y, alpha, color, fill, group, subgroup, linetype, size

b + geom_rect(aes(xmin = long, ymin = lat, xmax = long + 1, ymax = lat + 1)) - xmax, xmin, ymax, ymin, alpha, color, fill, linetype, size

a + geom_ribbon(aes(ymin = unemployment - 900, ymax = unemployment + 900)) - x, ymax, ymin, alpha, color, fill, group, linetype, size

LINE SEGMENTS

common aesthetics: x, y, alpha, color, linetype, size

```
b + geom_abline(aes(intercept = 0, slope = 1))
b + geom_hline(aes(yintercept = lat))
b + geom_vline(aes(xintercept = long))
```

```
b + geom_segment(aes(yend = lat + 1, xend = long + 1))
b + geom_spoke(aes(angle = 1:1155, radius = 1))
```

ONE VARIABLE continuous

```
c <- ggplot(mpg, aes(hwy)); c2 <- ggplot(mpg)
```

c + geom_area(stat = "bin") - x, y, alpha, color, fill, linetype, size

c + geom_density(kernel = "gaussian") - x, y, alpha, color, fill, group, linetype, size, weight

c + geom_dotplot() - x, y, alpha, color, fill

c + geom_freqpoly() - x, y, alpha, color, group, linetype, size

c + geom_histogram(binwidth = 5) - x, y, alpha, color, fill, linetype, size, weight

c2 + geom_qq(aes(sample = hwy)) - x, y, alpha, color, fill, linetype, size, weight

discrete

```
d <- ggplot(mpg, aes(fl))
```

d + geom_bar() - x, alpha, color, fill, linetype, size, weight

TWO VARIABLES both continuous

```
e <- ggplot(mpg, aes(cty, hwy))
```

e + geom_label(aes(label = cty), nudge_x = 1, nudge_y = 1) - x, y, label, alpha, angle, color, family, fontface, hjust, lineheight, size, vjust

e + geom_point() - x, y, alpha, color, fill, shape, size, stroke

e + geom_quantile() - x, y, alpha, color, group, linetype, size, weight

e + geom_rug(sides = "bl") - x, y, alpha, color, linetype, size

e + geom_smooth(method = lm) - x, y, alpha, color, fill, group, linetype, size, weight

e + geom_text(aes(label = cty), nudge_x = 1, nudge_y = 1) - x, y, label, alpha, angle, color, family, fontface, hjust, lineheight, size, vjust

one discrete, one continuous

```
f <- ggplot(mpg, aes(class, hwy))
```

f + geom_col() - x, y, alpha, color, fill, group, linetype, size

f + geom_boxplot() - x, y, lower, middle, upper, ymax, ymin, alpha, color, fill, group, linetype, shape, size, weight

f + geom_dotplot(binaxis = "y", stackdir = "center") - x, y, alpha, color, fill, group

f + geom_violin(scale = "area") - x, y, alpha, color, fill, group, linetype, size, weight

both discrete

```
g <- ggplot(diamonds, aes(cut, color))
```

g + geom_count() - x, y, alpha, color, fill, shape, size, stroke

e + geom_jitter(height = 2, width = 2) - x, y, alpha, color, fill, shape, size

THREE VARIABLES

```
sealsSz <- with(seals, sqrt(delta_long^2 + delta_lat^2)); l <- ggplot(seals, aes(long, lat))
```

l + geom_contour(aes(z = z)) - x, y, z, alpha, color, group, linetype, size, weight

l + geom_contour_filled(aes(fill = z)) - x, y, alpha, color, fill, group, linetype, size, subgroup

continuous bivariate distribution

```
h <- ggplot(diamonds, aes(carat, price))
```

h + geom_bin2d(binwidth = c(0.25, 500)) - x, y, alpha, color, fill, linetype, size, weight

h + geom_density_2d() - x, y, alpha, color, group, linetype, size

h + geom_hex() - x, y, alpha, color, fill, size

continuous function

```
i <- ggplot(economics, aes(date, unemployment))
```

i + geom_area() - x, y, alpha, color, fill, linetype, size

i + geom_line() - x, y, alpha, color, group, linetype, size

i + geom_step(direction = "hv") - x, y, alpha, color, group, linetype, size

visualizing error

```
df <- data.frame(grp = c("A", "B"), fit = 4:5, se = 1:2)
j <- ggplot(df, aes(grp, fit, ymin = fit - se, ymax = fit + se))
```

j + geom_crossbar(fatten = 2) - x, y, ymax, ymin, alpha, color, fill, group, linetype, size

j + geom_errorbar() - x, ymax, ymin, alpha, color, group, linetype, size, width
Also **geom_errorbarh**()

j + geom_linerange() - x, ymin, ymax, alpha, color, group, linetype, size

j + geom_pointrange() - x, y, ymin, ymax, alpha, color, fill, group, linetype, shape, size

maps

Draw the appropriate geometric object depending on the simple features present in the data. **aes()** arguments: **map_id**, **alpha**, **color**, **fill**, **linetype**, **linewidth**.

```
nc <- sf::st_read(system.file("shape/nc.shp"), package = "sf")
```

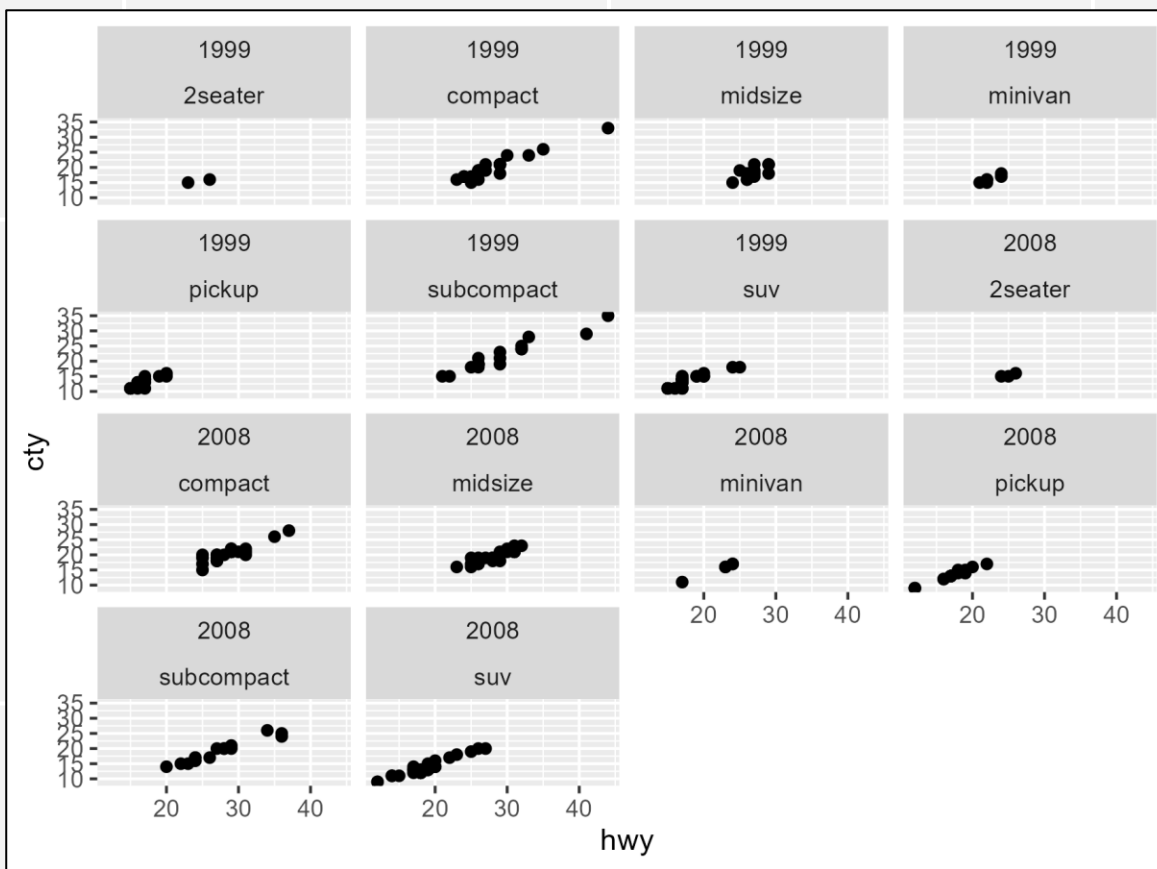

ggplot(nc) + geom_sf(aes(fill = AREA))

FACETS

```
ggplot(data, mapping)+  
  geom_point()+
```

`facet_wrap(~var1)`

`facet_grid(var1~var2)`

COORDINATES

```
ggplot(data, mapping)+  
  geom_bar(fill)+
```

```
+ coords_trans(ylim = c(0, 800))
```

```
+ coord_polar()
```

THEME
